

UNIVERSITY OF CRAIOVA
DEPARTMENTUL: AUTOMATION, ELECTRONICS AND
MECHATRONICS
SPECIALIZATION: ROBOTICS

4-TH YEAR

1. Integrated systems
2. Programmable automata
3. Mechatronic systems dynamics
4. Artificial intelligence
Pachetul A
5. Image processing and recognition
6. Information protection technology
7. Flexible manufacturing systems
8. Acquisition systems and interfaces
9. Mobile robots and microrobots
10. Mechatronic systems testing and reliability
11. Graduation project elaboration
Pachetul A
12. Robot structures modeling and identification
13. Numeric control
14. Programming languages for robots
15. **Virtual manufacturing**
16. **Man-machine intelligent systems**

1-ST YEAR

1. Mathematical analysis
2. Linear algebra, analytic and differential geometry
3. Physics
4. Materials chemistry
5. Computer programming and programming languages
6. Culture and civilization
7. English
8. Numerical calculus and mathematical statistics
9. Special mathematics
10. Bases of electrotechnics
11. Operating systems
12. Mechanics
13. Computer-aided graphics

2-ND YEAR

1. Linear electronic circuits
2. Numeric devices analysis and synthesis
3. Systems theory
4. Data bases
5. Object-oriented programming
6. Marketing
7. English 3
8. Digital electronics
9. JAVA applications
10. The basics of mechatronic systems
11. The basics of robotics
12. Computer architecture
13. Cognitive psychology
14. English 4
15. Internship 1

3-RD YEAR

1. Operating mechanisms and microsystems
2. Automata and microprogramming
3. Intelligent materials and structures
4. Robot control systems
5. Measurements and transducers
6. Microcontrollers and microprocessors
7. Fluid mechanics
8. Mechatronics
9. Applications of robotic systems
10. Adjustment engineering
11. Data transmission
12. Computer-aided design
13. Industrial software
14. Project management
15. Internship *2

1-ST YEAR

SUBJECT NAME: MATHEMATICAL ANALYSIS

NUMBER OF CREDITS: 6

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: Introducing the basic notions of differential and integral calculus.

COURSE CONTENT: Fundamental series; metric spaces; complete metric spaces; contraction principle; Numeric series; series of serial power developments; Limits and continuity for multivariable functions; Partial derivatives and differentiability; Local extremes for multivariable functions; Implicitly defined functions; Conditioned extremes; Introduction to integral calculus.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

BIBLIOGRAPHY:

Predoi, M., Balan, T. - Mathematical Analysis Vol I. Differential Calculus; Vol II. Integral Calculus

Predoi, M. - Analiza matematică, Ed. Universitară, Craiova, 1994

Predoi, M., Racilă, M., Constantinescu, D. - Teme de calcul diferențial, Ed. Sitech, Craiova, 2003

Predoi, M., Racilă, M., Constantinescu, D. - Teme de calcul integral, Ed. Sitech, Craiova, 2003

SUBJECT NAME: LINEAR ALGEBRA, ANALYTIC AND DIFFERENTIAL GEOMETRY

NUMBER OF CREDITS: 6

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: Introducing the basic notions of linear algebra, analytic and differential geometry: vectorial spaces, linear applications, square shapes, Euclidean spaces, symmetrical operators, free vectors, straight lines and planes, conics and quadrics, plane and space curves, surfaces.

COURSE CONTENT: Vectorial spaces; linear applications; bilinear shapes; square shapes; partial derivatives and differentiability; Euclidian vectorial spaces. Introduction to integral calculus; Free (geometric) vectors; straight lines and planes; conics and quadrics; plane and space curves; Surfaces.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

SUBJECT NAME: PHYSICS

NUMBER OF CREDITS: 5

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: introducing the basic notions in physics; elements of analytic mechanics, thermodynamics, optics and quantum physics.

COURSE CONTENT: Elements of mathematical physics; elements of analytic mechanics, Elements of thermodynamics, Elements of optics, Elements of quantum physics.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

SUBJECT NAME: MATERIALS CHEMISTRY

NUMBER OF CREDITS: 3

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: getting students acquainted with the basic notions about atoms, chemical connections, substance properties, solutions, notions of electrochemistry, material corrosion, electrical insulating materials.

COURSE CONTENT: Atomic structure; chemical connections, solutions, chemical balance; notions of electrochemistry; corrosion, metal and alloy protection against corrosion; Electrical insulating materials chemistry.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

SUBJECT NAME: COMPUTER PROGRAMMING AND PROGRAMMING LANGUAGES

NUMBER OF CREDITS: 6

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: Introducing the notions referring to computer programming and programming languages such as C, Matlab, LabView. There are approached basic concepts of procedural programming languages based on data flow.

COURSE CONTENT: Introduction to calculus systems architecture; computer programing fundamentals; programming languages; computer data representation; basic elements of C programming language; Operands and operators in C; Instructions; Structured data types; Pointers; Functions; Preprocessing; Ins/ outs; Elements of advanced programming; MATLAB matrix language; LabVIEW dataflow language.

SUBJECT NAME: CULTURE AND CIVILISATION

NUMĂR DE CREDITE: 2

SEMESTER: I

COURSE TYPE: complementary

COURSE OBJECTIVES: **Informatie lipsă.**

COURSE CONTENT: **Informatie lipsă.**

TEACHING LANGUAGE: Romanian

EVALUARE: colloquium

BIBLIOGRAPHY: **Informatie lipsă.**

SUBJECT NAME: ENGLISH

NUMBER OF CREDITS: 2

SEMESTER: I și II

COURSE TYPE: complementary

COURSE OBJECTIVES: practising the fundamental vocabulary and conversational structural paradigms which are specific to the domain of exact sciences.

COURSE CONTENT: The Inventor of the Modern Computer; Derivation; Vacuum Tubes; The Noun; Computer Architecture; The Article and Other Determiners; The Invention of the Internet; The Adjective. The Comparison Degree; Internet Connection; The Cardinal and Ordinal Numeral; Floppy; The Pronoun; E-mail; The Adverb. Comparison Degrees; Browsing the Web; The Preposition; Downloading; The Verb. General Notions; Operating Systems; Present Tenses; Internet Ethics; Past Tenses; Robotics; Future Tenses; Robot Tasks; The Active Voice; The Passive Voice; The History of Robotics; IF Clauses; Domains of Use for Robots; Reported Speech; The Three Laws of Robotics; Word Order; Cybernetics; Artificial Intelligence; Computer Viruses; Letter of Intent; The Symptoms of Internet Addiction; Letter of Application (I); Letter of Application (II); Language register: Formal Style; National Aeronautics and Space Administration; Are You Cut Out To Be An Astronaut?; Man and Machine; A Menace to Humanity.

TEACHING LANGUAGE: Romanian

SUBJECT NAME: NUMERICAL CALCULUS AND MATHEMATICAL STATISTICS

NUMĂR DE CREDITE: 4

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: To present the students the main numerical methods and algorithms used in: linear and nonlinear algebra, function approximation, differential and integral calculus, numerical solutions for differential equations with partial derivatives, elements of mathematical statistics.

COURSE CONTENT: Numerical methods in algebra; Function approximation; Numerical methods for integral evaluation; Numerical methods used to solve differential equations and equations with partial derivatives; Elements of probability calculus and mathematical statistics.

SUBJECT NAME: SPECIAL MATHEMATICS

NUMBER OF CREDITS: 6

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: Introducing basic notions concerning: complex analysis, ordinary differential equations, differential equations with partial derivatives, Fourier analysis, Laplace transformations, vectorial fields. The course aims at defining the notions clearly, presenting the basic results, domains of application, solving algorithms, connections with other domains.

COURSE CONTENT: Complex analysis; ordinary differential equations; Fourier analysis – Fourier series; Laplace transformation and Laplace discrete transformation; Fourier transformation; Linear differential equations with partial second order derivatives; vectorial fields, scalar potential, vectorial potential.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

 George Popescu, Matematici Speciale (curs în format electronic); Probleme rezolvate, exemple (în format electronic).

SUBJECT NAME: BASES OF ELECTROTECHNICS

NUMĂR DE CREDITE: 6

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: Introducing the basic concepts concerning electric circuits, presenting the main theorems and calculus methods which are applicable in linear and nonlinear circuits analysis.

COURSE CONTENT: Electric circuits and circuit elements; direct current linear circuits; Nonlinear direct current circuits; The sinusoidal regime of electric circuits; Monophased sinusoidal regime circuits; Triphased electric circuits; Quadrupoles and electrical filters; Non-sinusoidal periodic regime of electric circuits; The transitory regime of electric circuits; Distributed parametres circuits.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

SUBJECT NAME: OPERATING SYSTEMS

NUMBER OF CREDITS: 5

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: Establishing the component elements of an electrically operated system; the analysis of its functioning; Correlating a working machine with the adequate operating system; the interaction between a static converter and an electric motor part of an operating system.

COURSE CONTENT: The structure of an electric operating system; Static power converters (SPC); Operating systems with direct current motors; operating systems with three phase asynchronous motors (TASM); robot operating system.

SUBJECT NAME: MECHANICS

NUMBER OF CREDITS: 4

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: Introducing the basic concepts concerning the methods of making mathematical models describing the movement of mechanic systems with constant mass and a finite number of freedom degrees. Their analysis is accompanied by calculus examples and applications which illustrate the studied methods.

COURSE CONTENT: Sliding vectors theory; Geometry of masses; Material point kinematics; The kinematics of rigid solids and rigid systems; Dynamics.

SUBJECT NAME: COMPUTER AIDED GRAPHICS

NUMBER OF CREDITS: 3

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: Introducing the basic notions of computer-aided graphics: theoretical notions of technical graphics, general aspects of computer graphics, bidimensional and tridimensional AutoCAD.

COURSE CONTENT: General notions of technical drawing and computer graphics; bidimensional and tridimensional modeling.

TEACHING LANGUAGE: Romanian

EVALUARE: colloquium

2-ND YEAR

SUBJECT NAME: LINEAR ELECTRONIC CIRCUITS

NUMBER OF CREDITS: 6

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: providing the basic knowledge about the most important electronic devices and linear electronic circuits and offering the basics of analog electronic systems design and analysis.

COURSE CONTENT: Semiconductor diodes; bipolar transistors; unipolar transistors; amplifiers; active filters; linear stabilisers of constant tension; harmonic oscillators.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

SUBJECT NAME: NUMERIC DEVICES ANALYSIS AND SYNTHESIS

NUMBER OF CREDITS: 5

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: Introducing the basic concepts concerning: numeration systems, commutation algebra, MSI and LSI integrated circuits, bistables, counting and registers, the analysis and synthesis of synchronous and asynchronous sequential circuits.

COURSE CONTENT: Numeration systems; binary arithmetics, the geometrical representation of binary numbers; commutation algebra; the analysis and synthesis of commutation functions; special properties of commutation functions; commutation circuits hazard; integrated circuits families; MSI integrated circuits; LSI integrated circuits; integrated bistables; counting; serial and parallel registers; synchronous sequential circuits analysis; the synthesis of synchronous sequential circuits with bistable D and JK; the synthesis of sequential circuits with ROM memories.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

SUBJECT NAME: SYSTEMS THEORY

NUMBER OF CREDITS: 5

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: acquiring the theoretical competence and practical abilities of analytical calculus in the domain of linear and nonlinear automated systems using the adequate MATLAB software.

COURSE CONTENT: Elements of nonlinear automated systems; automated systems with reverse reaction structure. Automated systems statistics. Amplification role and limiting through stability. Root role. Drawing rules and applications. Compensators design. Cascade compensation. State-dependent reversed reaction. State estimation and dynamic compensation. The basic issue of adjustment and applications; Nonlinear and automated systems. General aspects. Nonlinear elements and their description. Nonlinear automated systems models. Autonomous systems and their signification. First order autonomous systems. Thermostats. Second order systems. State variables plane and movement quality table. Limit cycles and self-oscillations. Nonlinear systems stability. Absolute stability. V.M. Popov's absolute stability criterion.

SUBJECT NAME: DATA BASES

NUMBER OF CREDITS: 3

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: Introducing the basic concepts and techniques referring to the methodology of data bases design and assimilating the knowledge about using a system of managing data bases (SGBD).

COURSE CONTENT: Introduction to data bases aspects. The relational model. Relational data bases design (the analysis of imposed specifications, design methods, normalising and denormalising data bases). SQL. Management systems for relational data bases-SGBDR. DB management elements (types of users, creating a DB, administering instances, stock structure and DB objects schema, DB memory and resources, presenting the concepts of Backup, Database Recovery Manager etc.) Data base and user security. Multiple access to data and keeping their consistency. Distributed data bases.

SUBJECT NAME: OBJECT-ORIENTED PROGRAMMING

NUMBER OF CREDITS: 6

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: This course studies the basic concepts concerning the object oriented programming using as examples the main features and the concepts of C++ language. Following are presented and analysed the syntactic details of C++ language.

COURSE CONTENT: the declaration and implementation of the classes, the using of the pointers and the references, the study of the constructor and the destructor functions, the overloading of the operators and of the functions, the inheritance mechanism and derivations of the classes, the design of the hierarchies of classes, virtual functions and the polymorphism, the stream system for the input-output operations in C++.

SUBJECT NAME: MARKETING

NUMBER OF CREDITS: 2

SEMESTER: I

COURSE TYPE: complementary

COURSE OBJECTIVES: introducing the basic notions of marketing (market evolution, product policies, promotional activities, price setting, product distribution (emphasizing the IT).

COURSE CONTENT: The concept of Marketing; market research and market strategy; product policy; promotional policy; price policy; distribution policy.

TEACHING LANGUAGE: Romanian

SUBJECT NAME: ENGLISH

NUMBER OF CREDITS: 2

SEMESTER: I, II

COURSE TYPE: complementary

COURSE OBJECTIVES: Informație lipsă

COURSE CONTENT: Informație lipsă

TEACHING LANGUAGE: English

EVALUARE: colloquium

BIBLIOGRAPHY: Informație lipsă

SUBJECT NAME: DIGITAL ELECTRONICS

NUMBER OF CREDITS: 3

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: presenting, analysing and using numeric integrated systems. It offers support in orders to completely and correctly design a numeric system concerning the electric interface, static and transitory regime parametres, the use of high speed circuits and the electromagnetic compatibility of numeric systems.

COURSE CONTENT: Introductory notions; families of numeric integrated circuits made using bipolar technology;

numeric integrated circuits made using unipolar technology ; Interface circuits; bistable basculating circuits; semiconductor memory and programmable logic areas; electromagnetic compatibility in design using numeric integrated circuits; transmission lines and interconnecting high speed numeric integrated circuits.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

SUBJECT NAME: JAVA PROGRAMMING

NUMBER OF CREDITS: 3

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES : This course will introduce students to fundamental concepts in developing JAVA computer application.

COURSE CONTENT: Students will learn the object-oriented paradigm, programming concepts, the basics of the Java computer language, and how to use the Eclipse integrated development environment. Each student will independently develop increasingly complex applications using the Java language. Students will learn how to create and use objects, and how objects communicate with each other (by sending messages) to accomplish business processes. Students will study and apply concepts that relate to program quality including: program readability, style, testing, and documentation. Java si Web. Applets; Java Software Development Kit (SDK) and applications; Classes, interfaces, Java packages; Individual and parallel executions; 2D graphics and graphic processing; interfaces GUI user- concept and design.

SUBJECT NAME: ROBOTICS BASES

NUMBER OF CREDITS: 5

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: introducing the basic concepts about the robot as a system (structure, operating systems, sensory systems, elements of movement transmission), kinematic and dynamic modeling, operating space analysis, mobile robots, conventional systems of control.

COURSE CONTENT: Introducing the issues of control systems in robotics; geometric and kinematic models; robots within the operating space; particular problems in operating robots; dynamic models; mobile robots; operating systems and sensory systems in robotics; movement adjustment systems; control systems using state variables.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

SUBJECT NAME: COMPUTER ARCHITECTURE

NUMBER OF CREDITS: 5

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: Understanding the way a computer works as a system, beyond programme operating, peripherals use and the software and hardware technology. Understanding the way data and programmes are encoded

SUBJECT NAME: MECHATRONIC SYSTEMS BASES

NUMBER OF CREDITS: 5

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: creating a set of competences absolutely necessary to approach the domain of

and manipulated within a calculus system, and also the main ways of programme execution.

COURSE CONTENT: Data storage; codes used to store information; communication errors; data manipulation; calculus architecture; communication computer - peripheric devices; programme execution; an example of assembly language; communication mains in calculus systems; microarchitectures.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

BIBLIOGRAPHY:

Richard Y. Kain - Advanced Computer Architecture;
Sajjan G. Shiva - Computer Design and Architecture;
William Stallings - Computer Organization and Architecture;
Barry Wilkinson - Computer Architecture;
William Buchanan - Advanced PC Architecture.

SUBJECT NAME: INTERNSHIP I

NUMBER OF CREDITS: 5

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: preparing the future engineers specialise din Mechatronics and Robotics. There are envisaged notions concerning mechatronic systems as a whole, rapid scale prototype making, configurable systems, notions of mechanisms and robotics, electronics, sensors and actuators, programming, control and rapid prototyping of control. Each of these concepts is exemplified in one or more applications. The practical support is ensured by LEGO Mindstorms NXT teaching set.

COURSE CONTENT: Making a robot using Lego components and following the next three steps: robot building: building a mobile mechatronic platform with wheels; building a biped mobile mechatronic platform; robot programming using NXT-G graphic programming medium; testing the programme. Because of the flexibility of Lego pieces, a large number of structures can be built.

TEACHING LANGUAGE: Romanian

EVALUATION: colloquium

BIBLIOGRAPHY:

Kit-uleducational LEGO Mindstorms NXT

SUBJECT NAME: COGNITIVE PSYCHOLOGY

NUMBER OF CREDITS: 2

SEMESTER: II

COURSE TYPE: complementary

COURSE OBJECTIVES: Introducing knowledge about cognitive psychology understood as a detailed study of human cognitive system and of its subsystems, of the specific language and methodology, about the cognitive approach of one's personality correlated to one's psycho-social environment. The latter refers to a broader way of rethinking the new concepts and of integrating some already known psychological theories by the students.

COURSE CONTENT: Cognitive sciences and cognitive psychology; human psychic as an informational system; primary and secondary processing of information; attention; learning and memory neurobiology; language mechanisms; categorization as an operation of integrating information conceptually; human cognitive system architecture; personality and its neuro-physiological bases; the operational structure of behaviour.

TEACHING LANGUAGE: Romanian

EVALUATION: colloquium

3-RD YEAR

SUBJECT NAME: OPERATING MECHANISMS AND MICROSYSTEMS

NUMBER OF CREDITS: 4

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: developing an application focused on an overall view on intelligent materials and structures.

COURSE CONTENT: Mechanisms structure; kinematic coupling; kinematic chain; mechanism; plane kinematic groups; defining intelligent materials; Bingham's plastic model for fluids flow; the macroscopic modeling of ERF behaviour; ERF types; adaptive structures with E.R. materials; ER valves actuators; ER. Cilindric valves; SMA operating principle; SMA modeling; aspects regarding the optimal design of SMA actuators for microgrippers.

SUBJECT NAME: AUTOMATA AND MICROPROGRAMMING

NUMBER OF CREDITS: 5

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: introducing the basic concepts concerning programmable automata and microprogramming systems. There are presented modern methods of design and the newest systems used in industrial implementation.

COURSE CONTENT: synchronous automata analysis and synthesis; automata design using cabled logic and flexible logic; microprogrammed structures; principles; microprogrammed automata architectures; scalar and vectorial microprogrammable automata; programmable logic controllers; industrial robots control using CLP-uri.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

SUBJECT NAME: INTELLIGENT MATERIALS AND STRUCTURES

NUMBER OF CREDITS: 5

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: introducing the basic concepts referring to intelligent materials and structures and applying them in engineering , art and medicine. Theoretical aspects are accompanied by case study for the most important applications of intelligent fluids and materials having shape memory.

COURSE CONTENT: Introduction. Intelligent materials and structures; electrorheological and magnetorheological liquids; materials with shape memory.

SUBJECT NAME: ROBOT CONTROL SYSTEMS

NUMBER OF CREDITS: 5

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: The course presents theoretical and practical aspects concerning the control systems design for robotic structures, and also the structure and operating of evaluated robotic systems meant for industry.

COURSE CONTENT: The synthesis of control shema for manipulators and robots; ABB IRB 1400: the general aspects, basic operations, robot trajectory control.

SUBJECT NAME: MICROCONTROLLERS AND MICROPROCESSORS**NUMBER OF CREDITS: 3****SEMESTER: I****COURSE TYPE:** core course

COURSE OBJECTIVES: Knowing the architecture and functioning of some 16/32 bit processors, focusing on Intel 80x86 family. Knowing a modern PC/controller architecture, the system mains PC-104/ISA and PC-104+/PCI and the interfaces for those. Knowing the architecture and specific peripheral resources for representative families of 8 and 16 bit microcontrollers, their software and hardware used to develop a microcontroller application. It is important to develop the capacity of choosing a microcontroller for a specific application (calculus power, resources, etc).

COURSE CONTENT: Introduction to Intel 80x86 architecture; Execution of instructions 80x86; System architectures; System mains: PC-104 and ISA; PC-104+ and PCI; AVR (Atmel) family; 16LX (Fujitsu Microelectronics) family.

SUBJECT NAME: ADJUSTMENT ENGINEERING

NUMBER OF CREDITS: 4

SEMESTER: II

COURSE TYPE: specialty

COURSE OBJECTIVES: presenting the fundamental problems of continual and discrete automated adjustment

systems. There are presented theoretical and practical methods concerning the analysis, design and implementation of adjustment systems.

COURSE CONTENT: The general structure of a control system; conventional adjustment systems; automated control systems symbolising; typicalised laws of continual linear adjustment; analysis example starting from an automation schema: the adjustment system of a fluid flow; quality indexes and performance imposed on automated adjustment systems; unconventional structures of automated adjustment; automation equipment functions; classification of automation equipment; unified signals with automation equipment; Structures of making an industrial regulator; general aspects on adjustment laws making; making continual linear adjustment laws by means of operational amplifiers; automation problem formulation; the analysis of adjustment systems in stationary regime; the synthesis of continual automated adjustment systems; the synthesis of discrete automated adjustment systems in time; stochastic systems of automated adjustment; adaptive systems of automated adjustment; fuzzy systems.

SUBJECT NAME: COMPUTER AIDED DESIGN

NUMBER OF CREDITS: 3

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: Understanding the environment specific to computer-aided design, beyond programme operating and peripherics use. The students will be able to program a parametrized application to be operated by a non-specialist beneficiary in using a computer-assisted design system.

COURSE CONTENT: Reviewing elements of AutoCAD design; elements of AutoLISP in AutoCAD environment; access to AutoCAD entities using AutoLISP; programming applications with parameters settled in computer aided design environment.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

BIBLIOGRAPHY:

Proiectare asistată - curs, Dorian Cojocaru, Cristian Vladu; Proiectare asistată de calculator, Dorian Cojocaru, Cristian Vladu – Îndrumar de laborator;

Documentație de firmă AutoDESK, AutoCAD (Inventor, Electrical).

SUBJECT NAME: INDUSTRIAL SOFTWARE

NUMBER OF CREDITS: 3

SEMESTER: II

COURSE TYPE: specialty

COURSE OBJECTIVES: introducing the basic notions of real-time management of industrial processes, and getting the students acquainted with the main specialised languages for industrial applications MATLAB/Simulink/RTW and LabVIEW and also the microcontroller embedded software.

COURSE CONTENT: Notions of continuous systems discretisation; simulating hybrid systems by using Simulink; Fourier analysis in real time; signal analysis in real time; applications to audio signals; developing applications in real time; creating executives directly from MATLAB; Real Time Workshop (RTW). General presentation; implementing Quanser real time experiments; implementing simple embedded applications in KEIL development system.

TEACHING LANGUAGE: Romanian

EVALUATION: colloquium

BIBLIOGRAPHY:

SUBJECT NAME: DATA TRANSMISSION

NUMBER OF CREDITS: 5

SEMESTER: II

COURSE TYPE: specialty

COURSE OBJECTIVES: preparing the future engineers by ensuring their knowledge about information transmission theory, and the design and realization of data transmission systems.

COURSE CONTENT: Introduction to information transmission; communication channels; signals used in data transmission; data transmission using a sinusoidal carrier; numeric data transmission; error control in data transmission; data compression; data transmission systems in process control.

TEACHING LANGUAGE: Romanian

EVALUATION: written exam

SUBJECT NAME: INTERNSHIP 2

NUMBER OF CREDITS: 5

SEMESTER: II

COURSE TYPE: specialty

COURSE OBJECTIVES: specialising the future engineers in robotics and mechatronics, improving their technological knowledge. Internship is necessary to understand theoretical knowledge and to apply it.

COURSE CONTENT: The study of technological processes in food industry, energy industry, automotive industry, construction industry, etc. (Ford, Elpreco, Termo Ișalnița, Termo Rovinari, Termo Turceni, Fabrica de bere Craiova, Regia Autonomă Apele Române); Software and hardware systems use din automobile industry – real-time embedded control systems (Ford, Dacia-Renault Pitești, Hella, Continental Sibiu, Siemens etc); industrial processes management (Dacia-Renault, Elpreco, Ford); automated adjustment systems for temperature, pressure, flow capacity, etc (Termo Ișalnița, Termo Rovinari, Termo Turceni); flexible manufacturing lines; construction and operating (Ford, Elpreco, Fabrica de bere Craiova); programmable automata. Programming, operating, industrial implementation (Fabrica de bere Craiova, Elpreco, Ford, Siemens, Continental Sibiu); Industrial robots: operating, programming, maintenance (Ford, Dacia-Renault); distributed systems of industrial processes control (Termo Ișalnița, Termo Rovinari, Termo Turceni, Ford); graphic interfaces, virtual instrumentation and acquisition systems use din process control (Procontrol, Labview etc). (Termo Ișalnița, Termo Rovinari, Termo Turceni, Dacia-Renault); networks of industrial computers (Ford, Dacia-Renault, Termo Ișalnița, Termo Rovinari, Termo Turceni etc.).

SUBJECT NAME: PROJECT MANAGEMENT

NUMBER OF CREDITS: 4

SEMESTER: II

COURSE TYPE: core course

COURSE OBJECTIVES: getting the students familiar with the aspects linked to the management and control of project-organised activities.

COURSE CONTENT: Introduction; the project life cycle; the project proposal; organisational alternatives in project management; the working environment of the project manager; his/ her role and responsibilities; project proposals analysis; conflict management; project team gathering; planning diagram network; software for project management.

TEACHING LANGUAGE: Romanian

4-TH YEAR

SUBJECT NAME: INTEGRATED SYSTEMS

NUMBER OF CREDITS: 5

SEMESTER: I

COURSE TYPE: specialty

COURSE OBJECTIVES: introducing basic notions concerning integrated systems principles, the systems with limited calculus and communication resources; getting the students familiar with real-time industrial systems which are control network distributed and microcontroller-based.

COURSE CONTENT: Integrated systems architecture; the general architecture of microcontrollers; real-time operating systems for integrated systems; the interfacing between integrated systems and external processes; communication with the exterior.

TEACHING LANGUAGE: Romanian

SUBJECT NAME: PROGRAMMABLE AUTOMATA

NUMBER OF CREDITS: 4

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: introducing the basic concepts concerning programmable automata programming and the control of robotic systems/ processes by means of programmable automata. Lab classes are meant to develop students' competences in the field of production systems/ processes automation by using programmable automata.

COURSE CONTENT: Introduction to control systems; programmable automata structures; principles in creating PA system/ process control programmes; PA special functions; PA manipulators and robots control; Interfacing PA with the controlled process; PA interconnecting; choosing, installing and operating a PA.

SUBJECT NAME: MAN-MACHINE INTELLIGENT SYSTEMS

NUMBER OF CREDITS: 4

SEMESTER: I

COURSE TYPE: core course

COURSE OBJECTIVES: clarifying the concepts concerning the utility and adaptability of software products to the user's requirements

COURSE CONTENT: the utility and adaptability of software products to the user's requirements; user oriented design; user interfaces; software architectures. User imposed particularities; output models; conceptual models; Input models; design principles; prototypical frame; constraints and strata; graphic design; user-type prototyping at calculus system level; instruments; heuristic evaluation; product testing by the user; the design of product experimenting and checking systems; experiment analysis; Research: predictive evolution. Visual information. Touch type user interfaces. Enlarging capacity interfaces and transparent interfaces.

SUBJECT NAME: IMAGE PROCESSING AND RECOGNITION

NUMBER OF CREDITS: 4

SEMESTER: I

COURSE TYPE: specialty

COURSE OBJECTIVES: introducing the basic concepts and creating the necessary competences to integrate hardware and software components in order to apply artificial vision applications to robotics.

COURSE CONTENT: Characteristics of human sight. Image sensors technologies. Camera characteristics. The characteristics of image acquisition and processing systems. Geometric transformations. Camera calibration. Contour extraction. Areas extraction and labeling. Characteristics extraction. Characteristics normalization. Shape recognition. Artificial vision applications in robotics.
